EXPERIENCE

Backend Developer - MK Academia | *Education platform* | *Project-based*

Website: <https://www.mk-academia.uz>

- Worked on backend logic, API structure, database relations, platform features and reliable user flows for an educational product.

Full Stack Developer - Freelance / Client Projects | *CRM, ERP, bots and admin panels*

- Built client-focused CRM/ERP systems, Telegram bots, dashboards, admin panels, authentication, roles, payments/debtors logic, statistics and reports.
- Worked with API documentation, database design, deployment preparation and production-ready business logic.

SELECTED PROJECTS

F1RC.UZ - ongoing web and mobile app project for racing / RC racing: racers, teams, competitions, rankings, points, challenges, streaming links, referrals, payments and admin panel.

MK Academia - educational platform and real client project; backend APIs, database relations, business logic and platform functionality. **Link:** www.mk-academia.uz

Learning Center CRM / ERP - student, teacher, group, attendance, monthly payments, debtors, roles, dashboard, reports and admin management system.

Taxi Lead Bot - Telegram automation system that filters passenger requests from groups, classifies messages, forwards leads to drivers, and provides admin commands/statistics.

Open Budget Campaign / Statistics Bot Concept - voluntary campaign manager with project management, official links, vote statistics, target/auto-stop, user management, admin panel and Excel export.

Additional GitHub Projects - `Movie_UZ`, `School_Lab`, `Azizv_Bot` and `LMS`: movie platform, lab management, Telegram service bot and learning management system.

EDUCATION

School No. 57, Yangiyo'l | *10th Grade*

Najot Ta'lim | *Full Stack / Backend Course*
